

Since 2008 the S&P 500 and Berkshire basically go hand in hand. At times the BRK.A advances, or the S&P 500 and then they catch up again.

For people who like diversification, we teach how to trade exchange traded funds of the S&P 500 and if we only produce a 2% monthly income above and beyond the market progression we are way ahead in our returns compared to a Fund like Berkshire.

The big advantage of the small investor is specialized knowledge in some sectors and speed of decision: we are in and out of a security in split seconds. This applied an educated market investor will advance the best fund managers by speed and control.

Imagine we had invested \$150,000 two years ago into one share of the A-Fund of Berkshire, the share would be worth \$121,000 today. Applying the NeverLossTrading concept with the same investment, preventing the down turn and making a constant income of 2% a month our account would show: \$241,265.6. In other classes we teach how to greatly benefit from downturns with monthly income way above the 2% mark.

The advantage of the small investor is speed. We do not have to comply to SEC regulations. When we spot what is going on in the market it takes us seconds to react. While a huge fund holder has to slowly sell in and out of positions.

Take your future into your own hands, learn how to make money as a self investor. We are here for you: contact@NeverLossTrading.com.

Summary

We are comparing the Berkshire Hathaway A Fund development since 2008 to the S&P 500 to demonstrate and promote how the small investor can advance the best fund managers by specialized knowledge and speed. With NeverLossTrading people will be able to invest in \$1,200 increments instead of \$120,000 and produce a constant monthly income from shares owned. As a small investor we do not have better knowledge than a fund manager, but spot their actions and are able to react much faster and beat the market by speed.

Key Words

Berkshire Hathaway, NeverLossTrading, Funds, Stock Market, investor, small investor, Return, monthly return, stocks, Funds.
